SEE US AT BOOTH 240!

Hard Impact Technologies, LLC has redesigned the arrow industry. We've taken the standards of bow hunting to a new level.

Behind the scenes, inside every arrow, we have built a system that creates devastating results to your down-range target. This system involves patented Weight Transferring Technology that is deployed inside the arrow shaft at the moment of impact. The **Weight Transferring Technology** causes a deeper penetration with greater kinetic energy into your down-range target.

To engage the transferring system, simply point the arrow up before placing the arrow into the crossbow or compound bow. The system will not deploy until the moment of impact with your target. The system is housed near the front of the arrow shaft, providing pinpoint accuracy and more stabilized arrow flight.

We have developed this system for compound bow hunters and crossbow hunters.

CLONE HIGH USA

Clone High USA - Poster
Illustrator

Way, way back in the 1980's
Secret government employees
Dug up famous guys and ladies
And made amusing genetic copies
Now the clones are sexy teens now
They're gonna make it if they try
Loving, learning, sharing, judging
A time to laugh whichever
And cry...
