

HARD IMPACT TECHNOLOGIES™

PENETRATOR™

THE ONLY WEIGHT TRANSFERRING TECHNOLOGY™ ARROW SHAFT

Hard Impact Technologies, LLC has redesigned the arrow industry.
We've taken the standards of bow hunting to a new level.

Behind the scenes, inside every arrow, we have built a system that creates devastating results to your down-range target.

This system involves patented **Weight Transferring Technology™** that is deployed inside the arrow shaft at the moment of impact.

The **Weight Transferring Technology™** causes a deeper penetration with greater kinetic energy into your down-range target.

The system is housed near the front of the arrow shaft, providing pinpoint accuracy and more stabilized arrow flight.

We have developed this system for compound bow hunters and crossbow hunters.
